

SILICONE-FREE ADHESIVE PLASTIC FILM

ULTRON SYSTEMS, INC.

SILICONE-FREE ADHESIVE PLASTIC FILM

Say Goodbye to silicone-related contamination problems. Our new line of adhesive plastic film contains NO silicone release agents, resulting in a cleaner process and more consistent adhesive properties. This silicone release agent is common in most adhesive plastic films and facilitates film unwinding.

Silicone-free adhesive plastic films offer the same linear elongation properties as our other films for consistent expansion during die separation and share the same uniformity of base film and adhesive. In addition, these films have the advantage

of being able to store wafers/die for longer periods of time without contamination and are available in a variety of thicknesses and adhesive strengths to meet any process requirements.

For most film types, rolls can be cut to exact size requirements. Our large inventory assures that all orders are usually shipped within 24 hours.* No more waiting, no more line down situations. Most orders are shipped the same day.

Cutting-edge film technology from
Ultron Systems, Inc.

Ultron Systems offers a complete line of adhesive plastic films for wafer/die handling.

** Special sizes/orders require slightly longer lead times.*
